INTEGRATIONS
INTO YOUR HOME CARE

Saving you
MONEY and TIME

With technology continuously advancing in home care software programs, Nevvon recognizes the importance of making your experience timely, efficient, as well as cost-effective and simple.

The Evolution of Home Care Software

Over the course of the last decade, home care software has seen a tremendous amount of new growth, and dozens available to agencies. As new technology develops and emerges, the home care industry experiences new advancements in software programs. There have been developments in a variety of different home care aids including, billing, financial, clinical, scheduling, medical records, and point of care. With all of these aspects integrated into software programs, it reduces costs and time and increases efficiency and effectiveness.

What are API Integrations?

Application Programming Interface (API) integrations are a beneficial system for businesses and their consumers to use. API allows for the delivery of data and implements connectivity between devices and programs. This is ultimately achieved through the API's interaction and communication between two or more applications, data, and devices, which reinforces overall performance. With the use of API integrations for your enterprise, you will reduce any sort of manual data entry and your data will be streamlined. In the end, API integrations will help your business become more productive, efficient, and effective with its ability to administer ease to you and be valuable to your consumers.

Common Integrations for Home Care Software

Below are short summaries that indicate just how these common integrations provide the utmost benefit to home care software.

Billing

Billing and invoice software automates the process of producing and sending invoices, as well as receiving payments.

Hiring

Centralizing the hiring process to save time efficiently, streamline operations, and build the best team possible.

Referrals

Management platform enabling networks of community health organizations and home care to capture and manage all referrals.

Payroll

Payroll processing is designed to provide a secure, convenient, and easy-to-use experience.

Training

Implementing both intuitive and user-centric education and compliance training platforms for caregivers.

Training API Integration Use Case

1. Problem:

In all home care agencies, there is a very high turnover rate for staff. The industry is continuously looking to improve and find solutions to this issue and other issues that stem from this matter. Therefore, as agencies begin to hire and terminate employees, there is a strong demand to find an efficient, effective, and most importantly a compliance-based training partner.

1. Solution

Introducing a thorough training platform for staff, it will enable an agency's human resource team to only add or remove employees in the home care software with ease. This also limits the probability of human error when individuals manually add or remove home care staff.
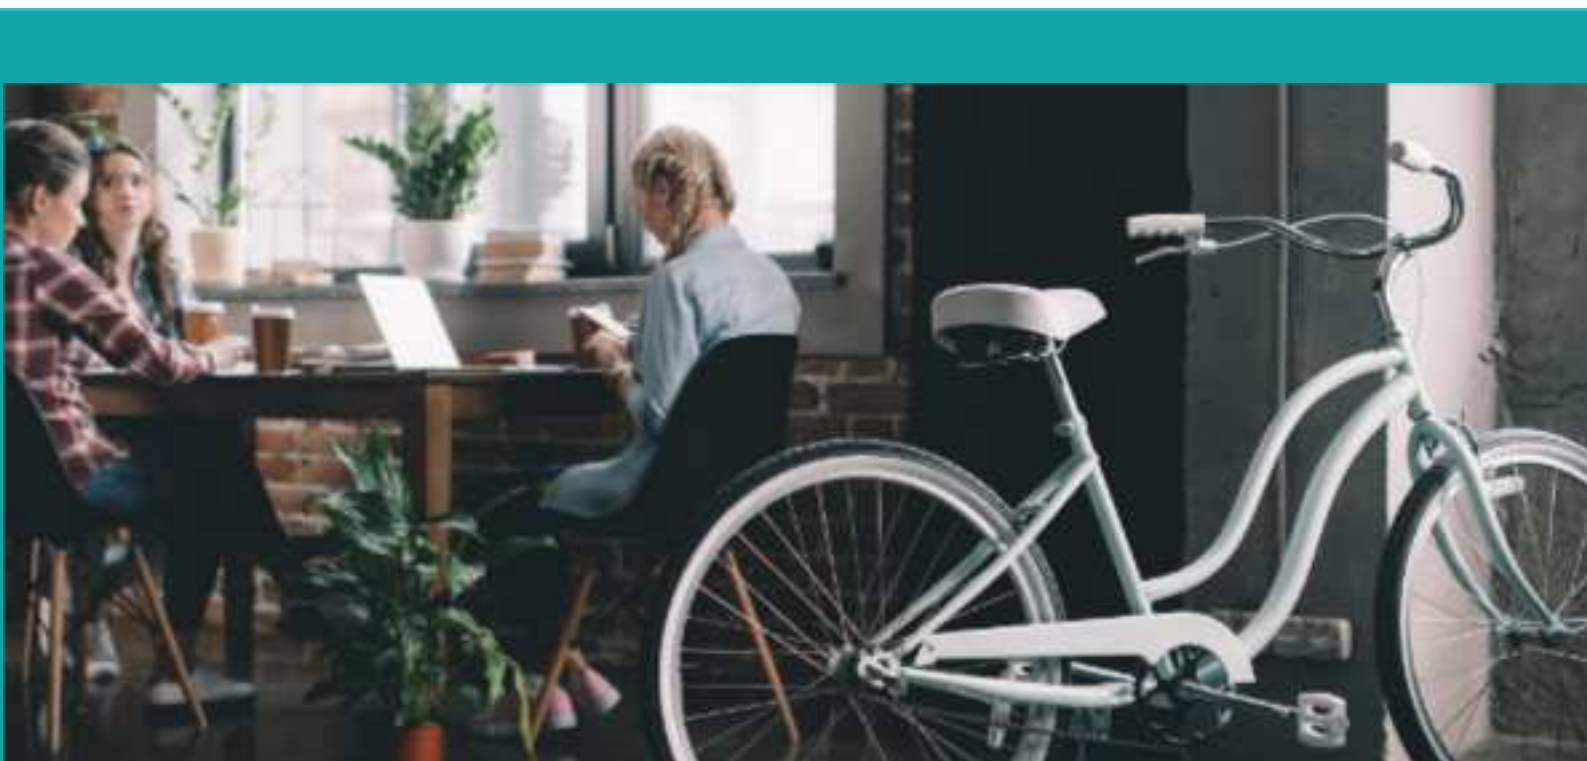

2. Problem:

In the United States, many States and their home care agencies are legally obligated to pay caregivers for the time that they spend completing their training. However, when training is done virtually it becomes increasingly difficult for agencies to monitor each caregiver and their time spent training, as every individual completes it on their own time.

2. Solution

How can this issue be resolved? API integration with payroll will enable each hour of training completed by the caregiver to automatically send a trigger to payroll. This trigger will identify and acknowledge that the caregiver will be paid for the hour of training that they had fulfilled, successfully.

We recognized how your home care agency can save time and money. Get connected.

3. Problem

Without an API, many agencies are required to scan or print training certificates and ensure they are added to the caregiver's profile. This process of receiving the certificate, scanning or printing, and finally filing the certificate leaves problematic room for human error. Ensuring compliance for all home care staff is essential and important.

3. Solution

With the use of an API system, once the caregiver completes their training, the complete report or certificate will automatically update in their specific profile or record. In other words, their completion is automatically updated to their profile without any manual labor.
